Subject: re: Malibu High School

To whom it may concern,

The most urgent matter we face today is to find a safe place for our students on Aug 19th, 2014. The district has not yet agreed to portable units for students and Sandra Lyon is out of town for the next two weeks. Please consider and implement the following:

1. Order SMMUSD to remove students from any potential exposure, until full source testing and remediation has been completed. School starts on August 19. Please ensure that students at MHS and JC have a place to be educated that is free of PCBs. ie: provide portable (pcb-free) classrooms for any rooms that violate 50ppm until which time renovation or full remediation has been completed.
2. Order SMMUSD to immediately test all the caulk/building materials suspected of containing PCBs in all classrooms constructed or renovated pre-1979
3. Order SMMUSD to immediately remove all PCB material in excess of 50ppm that is in violation of TSCA
4. Reject Environ's second PCB plan as wholly inadequate and in violation of TSCA regulation. There is no legal basis for leaving illegal levels of PCBs in place for 15 years. Fines under TSCA should be levied on the district for every day that they have not provided an appropriate plan since their due date of March 30th, 2014.

I support [Malibu Unites' formal letter](#) sent to the EPA to reject Environ/district's plan to leave PCBs in place for 15 years.

Respectfully,

~ Donna Sorce

parent of a current MHS 7th grader
